

## Exporting and uploading mastering instructions:

1. Export the mix/mixes following up the requirements:

### File Format

Stereo WAV or AIFF, 24 bits, no noise shaping or dithering.  
44.1 kHz or higher. Do not downsample or upsample the sample rate of the final mix.

### Headroom

The mix should ALWAYS peak somewhere between -12 and -3 dBFS.

### Master Bus Plugins

If you are using any mastering-purpose plugins on the master buss remove them prior to exporting.  
Do NOT limit or clip your mix.

### Fades

Do not fade out the file yourself but write us where the fade should begin and end.

3. Compress the mix renders into a rar or zip.
2. Upload that rar into a free hosting service like rapidshare, megaupload, dropbox, sendspace etc, or your personal server.
5. Send us the link!
